

**Subject: Invitation to Participate in an International Aerospace Student Conference**

Dear aerospace associations,

We're STAR (Student Technical Alliance for Rocketry), the aerospace club of University of Technology of Compiègne (UTC), in France.

Our main activity is to compete annually at C'Space, a French national aerospace competition organized by the French Space Agency (CNES) and the student association Planète Sciences. It brings together students from engineering schools and universities to design, build, and launch experimental rockets and scientific payloads. By sharing our experience and by organising conferences, our goal is to give UTC students an introduction to the aerospace industry.

As a part of this initiative, we are organizing an international remote video conference between different aerospace university clubs and interested aerospace companies to create bonds, exchange on our respective projects, learn from each other's experiences, and discuss our individual and collective futures.

The event will be held online and is scheduled to last between 1 and 1.5 hours the 22th of May at noon. It will be structured into three main parts:

- **Club Talks:** Each university club will have the opportunity to present themselves, their achievements, and their future projects so we can get to know each other better.
- **Industry Talks:** Presentations by aerospace industry experts, offering a conference about the future of aerospace on topics such as AI, new technologies, or the environment issues.
- **Q&A Session:** An opportunity for participants to ask questions and engage directly with the speakers.

Our aim is to build a solid international network with you and other international college clubs that all keep the aerospace industry close to heart, and to strengthen ties with aerospace companies. We also hope to offer students a better understanding of the professional world and the wide range of careers available in the aerospace sector.

We would be honored to have one or several members of your club speak at this conference to share your advances, strengths, and challenges with your current projects or to attend and learn from other universities and companies. Come compare and contrast your projects with ours to mutually learn and improve our current aerospace devices. We would be delighted to have your association participate in this event and contribute to this collaborative project. Students interested in aerospace are also welcome to assist at the conference.

Please let us know if you are interested. Feel free to reach out with any questions, and don't hesitate to contact us to arrange a meeting to discuss the project in more detail.

Looking forward to hearing from you !

Best regards,

Aurélie Denizon
